HEATS WATER

IMMEDIATELY

FORCED AND NATURAL DRAFT GAS WATER HEATERS

GASMATE

Forced Draft Instantaneous Gas Water Heater

20 Litre

product application

Kwikot Gasmate Forced Draft Instantaneous Gas Water Heater 20 litre water heater is suitable for the usage of large volumes of hot water for bathing and showering. The unit is for **outdoor installation only** and operates solely on **LPG Gas**.

product features

Compact and aesthetically appealing, this gas water saves on space when installed outdoors.

Easy to operate as the water heater incorporates a micro-computer which controls the electronic proportional valve, step-less speed changing DC fan and a high loading burning device, resulting in the unit generating hot water automatically when the power is switched on and the tap is opened.

With the built-in micro-computer, the water heater automatically attempts to generate water at the pre-set temperature. In computing the volume of gas and air to heat up the water flowing into the water heater, it takes into consideration the water pressure, the temperature of the water flowing into the water heater and the pre-set temperature of the water flowing out of the water heater.

With the sensitive ultra-low water pressure starting device, the water heater can operate even at low water pressures.

The water heater has one remote controller, which can be installed away from the outside where the water heater is installed. An additional two more remote controllers can be purchased as an optional extra and be installed at other convenient locations.

When the main power switch is first turned on, the LED display will indicate 42°C and after 3 seconds, it will show the actual temperature of the water flowing out of the water heater. The user in the priority mode may then set their preferred temperature for the water outflow. As long as the main power switch is not turned off, the water heater will continue to operate and generate water at the selected pre-set temperature during usage. The display will also flash the fault code accordingly to indicate the nature of the fault of the water heater whenever the heater malfunctions.

Remote Controller (FGI-20L-REM)

GASMATE

Natural Draft Instantaneous Gas Water Heaters

product application

The Kwikot Gasmate Natural Gas Instantaneous Gas Water Heaters 5 litre is suitable for the immediate supply of hot water for kitchen sinks and preparation bowls, laundry wash troughs, bathroom wash hand basins and the larger 11 litre and 14 litre models for showers and baths as well.

product features

All models are of a natural flue type, automatic water control operation with a flow stabilizing device, and efficient combusting system with pulse ignition. The battery ignition is by 2 x D Cell Torch Batteries, which provides the power to open the gas solenoid and fire the igniters when the water flow is detected. Once the gas is ignited, the igniters cease firing and the water heats up immediately.

product installation data

All Gas Water Heaters may only be installed by a gas installer registered with the South African Qualifications & Certification Committee (SAQCC) and installed in accordance with the requirements of SANS 10087-1 for the use with LPG gas, SANS 827 for the use with Natural gas and any other fire department regulations and/or local bylaws applicable to the area.

product warranty

The Forced Draft and Natural Draft Instantaneous Gas Water Heaters have a two year warranty period from date of purchase validated by means of a purchase invoice. Alternatively if an invoice cannot be produced, the warranty period will be determined by the manufacture date code on the gas water heaters. **Electrolux SA (Pty) Ltd** makes no warranties or representation in respect of the installation of the gas water heaters.

The warranty is applicable to South Africa, Botswana, Lesotho, Namibia and Swaziland and subject to water conditions equivalent to main Metropolitan supply authorities in South Africa.
