

TUFF-SEAL™

Advanced Interlocking Floor Tile

Tuff Seal's hidden interlocking and joining system enables the quick and easy installation of a stylish floor with minimal effort. The tiles are sleek and attractive and compliment a broad range of interior applications.

The "Tuff Seal" tile is a second generation design with a sealing cavity located on the top lip of the tile joint.

Although adhesives are unnecessary in many light duty applications, it is recommended that the tiles are glued to the subfloor. In dirty or high traffic environments it is recommended that the special interlock glue is used, in addition to the full spread adhesive.

This product measures 450 x 450 x 6.3 mm and is available in the Marquis pattern and in three attractive colours. Dark Grey, Chocolate Brown, Terracotta and Mushroom.

Applications
