CISA  
Safe Home

# Making your home safe is our number one priority

CISA has always been on the cutting edge of security technology, designing and building innovative systems which offer protection against the most sophisticated methods of intrusion and forced entry.

One of the latest CISA products for armoured doors is Revolution PRO, the new lock with a blocking device which is activated if the cylinder is extracted.

Increase your security, choose CISA.

*CISA Revolution PRO blocks the opening of the door if the cylinder is extracted.*

*CISA Revolution PRO is activated only when the door is completely closed.*

*For even greater security, fit Revolution PRO with CISA cylinders.*

## CISA Revolution PRO lock

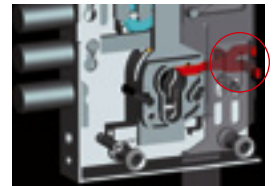

Maximum security of armoured doors is achieved primarily by choosing the right lock, cylinder and protective rose for the cylinder.

Most attempts to force entry through armoured doors are made by pulling the cylinder from the lock, so CISA Revolution PRO locks have been specially designed as a deterrent to this kind of intrusion.

CISA Revolution PRO locks are fitted with a security device which is activated when the door is completely closed (deadbolt fully engaged).

If an attempt is then made to extract the cylinder, the safety device is activated, blocking the lock.

### For maximum security, CISA recommends:

**RS3 S cylinder** high resistance to tearing, bumping and drilling, the key has a bitted mobile element (difficult to clone) and comes with a Security Card for authorised key duplication. Keys are duplicated exclusively by CISA.

### Protective rose

An effective deterrent to would-be intruders, it protects the cylinder from direct attacks from lock forcing tools.
