This Classen flooring range is complimented by the highly functional M Trim Laminate Trims range which includes the most commonly used profiles for use with laminate and wood flooring. There are many options of profiles for expansions, transitions, finishes, ends and steps. This entire range is locally manufactured and readily available. Choose from anodized finishes and some profiles are also available in matching wood foil wraps that are classed at AC3 Class 31. Choose from a wide range of colour matched skirting for the Classen range and use this range to offer a skirting solution for all other wood flooring types. Kirk Marketing also offers all the installation tools needed for laminate flooring, this includes combi underlay, manual laminate cutters, wedges and the like. Our M Chem laminate cleaner in spray bottle with 1 and 3 liter refills as well as the microfiber mop are specifically designed for use with wood floors. This one stop solution for flooring, accessories, tools and cleaners makes it easy to get access to the best possible products to add value to your home, office or project.

ECOLOGICAL DESIGN FLOORING

NEO 2.0 is extremely robust and waterproof flooring free of PVC and other harmful substances and receives the Blue Angel label as an ecologically friendly product. 100% recyclable. The core material is CERAMIN , which is a ceramic-like composite material made from natural uncontaminated minerals which are tightly bonded with polymers such as polyolefine used in medicine and food packaging. The CERAMIN is bonded at low temperatures and is low weight , but just as stable as ceramic. CERAMIN is a heavy duty material, extremely robust and waterproof that is unbreakable. The production of NEO 2.0 is low in energy use and emissions.

NEO 2.0 is laid as a click system flooring using a patented Classen click system with the Short sides locking strength being greater than 1500N/m and the Long sides locking strength being greater than 1000N/m. If laid with an underlay - the reduction of transmitted noise impact is reduced by 16DB.
