L<sup>2</sup>-technology®

## A NEW GENERATION OF ROOF TILE FINISHES

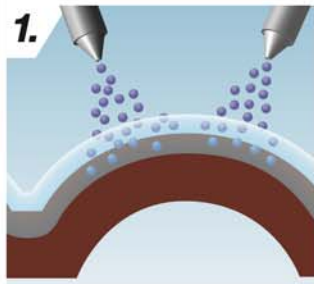

SURPASSING THE JONES'...

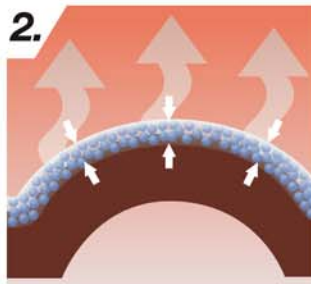

...WITH THE NEW LUMINO® TILE FINISH COMING TO SOUTH AFRICA!  
LOOKS THAT LAST!

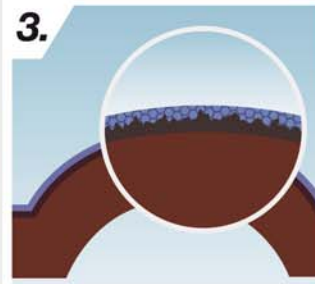

# THE PATENTED L<sup>2</sup>-TECHNOLOGY® FOR LOOKS THAT LAST!

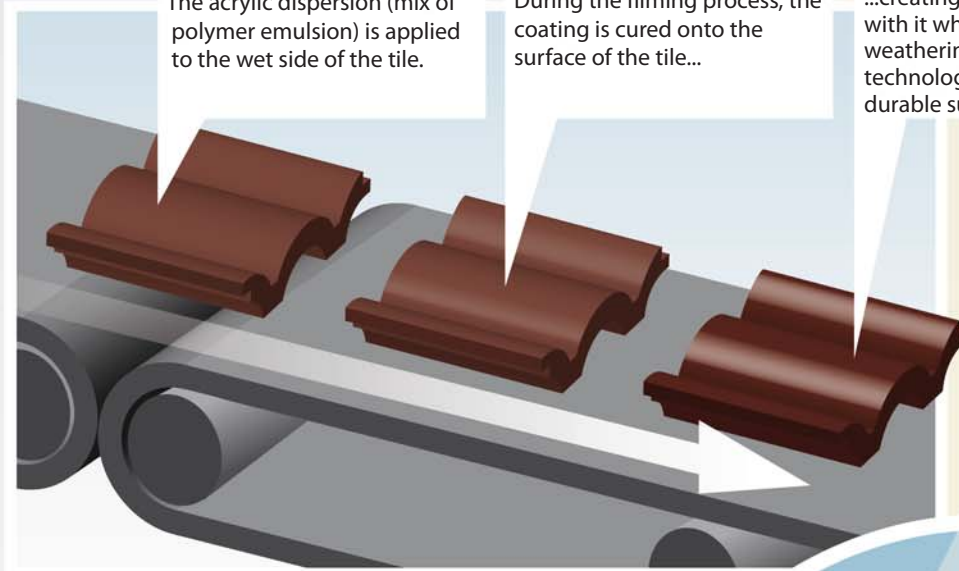

**1.** The acrylic dispersion (mix of polymer emulsion) is applied to the wet side of the tile.

**2.** During the filming process, the coating is cured onto the surface of the tile...

**3.** ...creating an inseparable bond with it which prevents it from weathering and fading. The L2-technology® creates a super durable surface.

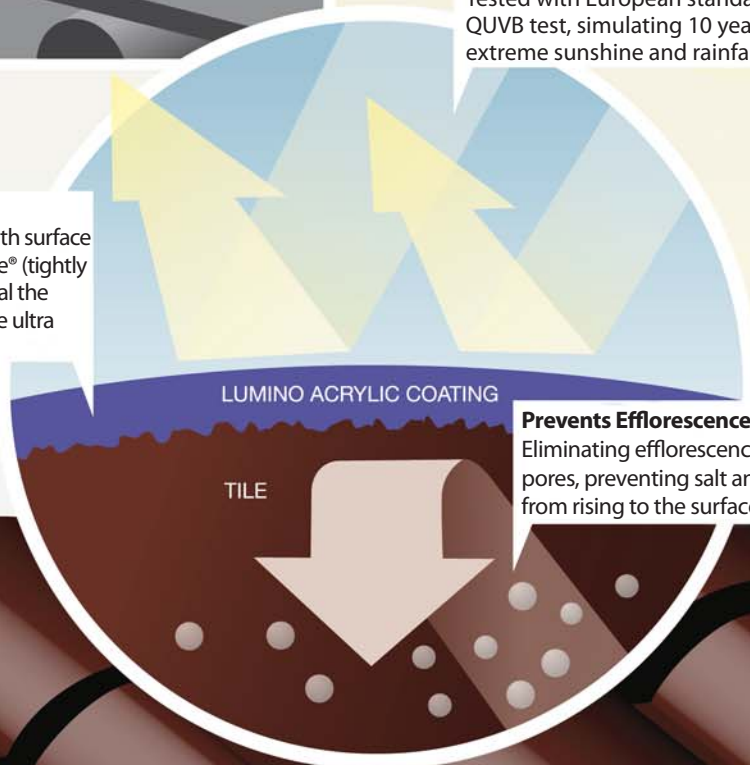

## UV-Resistant

Tested with European standard QUVB test, simulating 10 years of extreme sunshine and rainfall.

## Ultra Solid Finish

Extremely durable and smooth surface through L2-filming technique® (tightly bonded polymer particles seal the porous surface and create the ultra solid and resistant finish).

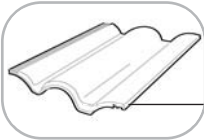

## Prevents Efflorescence

Eliminating efflorescence by sealing pores, preventing salt and minerals from rising to the surface of the tile.

- Worldwide experts in acrylic coating techniques.
- Over 20 years of success in Europe and in sun-extreme climates such as Malaysia and Indonesia.
- Developed and tested by Monier Technical Center in Germany.
