Targets of smoke and heat extraction

Since fire within buildings cannot be prevented in general the smoke and heat extraction has a central meaning for preventive fire protection.

The targets reached through smoke and heat extraction systems.

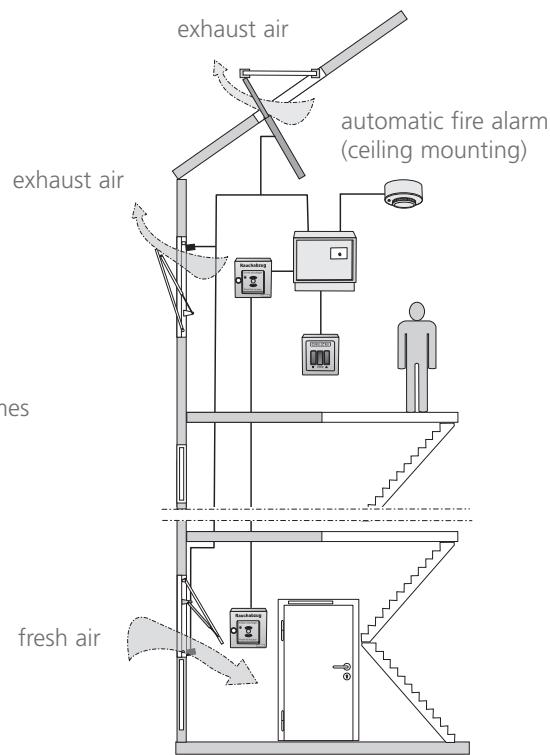

Scope of applications

Designed for the use in:

- hospitals
- office and industrial buildings
- shopping malls
- warehouses
- business locations
- public buildings
- assembly halls
- banks
- hotels and restaurants
- administration buildings
- homes for the handicapped and retirement homes
- airports and railway stations
- car dealers

and in general:

- in rescue and escape routes (staircases and corridors)

systematic scheme of a RWA system

Elements and design by the example GEZE RWA 100 E

Example: GEZE RWA 100 E

- ① Opening and locking system RWA 100 E
- ② Motor / electrically operated spindle drive E 250 (stroke) -...
- ③ Emergency power supply unit E 260 N - VdS
- ④ Smoke detector RM 1003 / 24 V DC
- ⑤ Heat difference detector WM 1005 / 24 V DC
- ⑥ RWA switch FT 4 / 24 V DC-VdS
- ⑦ Vent switch E 50/...
- ⑧ GEZE rain-wind control / weather station

GEZE RWA systems

System construction - functional description

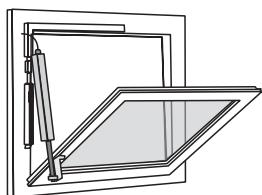

The control system of the electrically operated GEZE RWA in general consists of the components as shown in the system illustration.

The system covers two big tasks:
the emergency case and daily ventilation.

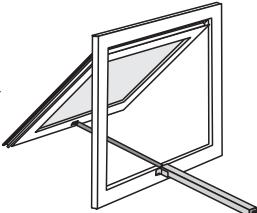

The control for the smoke and heat extraction is made by the emergency power supply unit. The windows, smoke flaps and light domes are opened and closed via electric drives. For ventilation purposes, the control is made via vent switch, rain/wind control or timer and in an emergency manually via RWA switch or automatically via smoke and heat detectors.

Optional alarm signals can be connected in addition.

e.g. fire alarm
system
(potential-free)

GEZE RWA systems

GEZE RWA systems consisting of at least:

- ▶ one opening system
- ▶ one emergency power supply unit E 260 N
- ▶ two RWA switches
- ▶ further components as an option, however, smoke and heat detectors are urgently recommended

If the system is to be used for ventilation purposes, too, further components such as vent switches are required.

In an emergency the windows open to their full opening angle. In this case the vent switches are out of order. The windows are closed via the reset pushbutton integrated in the RWA switch or via an alarm reset in the central master station. The control of these different functions is made by the RWA master station E 260 N which also supplies the current and bridges power failures.

GEZE emergency power supply units E 260 N

Product features

- ▶ mains voltage 230 V AC 50 Hz
- ▶ output voltage 24 V DC, residual ripple < 20% max. 30 V
- ▶ integrated emergency power supply for at least 72 h
- ▶ all functions even in the case of power failure
- ▶ battery control (break, low voltage, fault)
- ▶ individual fuses for each motor group
- ▶ line control
- ▶ LED indication for operating and fault indication
- ▶ enclosure ratings IP 54
- ▶ ambient temperature +5° C to + 40° C

Connecting possibilities as shown in the schematic overview.

Housing

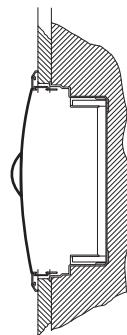

- ▶ E 260 N2/1 surface mounted: plastic housing
- ▶ E 260 N2/1 flush mounted: plastic housing incl. door, optional: door lockable
- ▶ E 260 N 12/2: plastic housing
- ▶ E 260 N 32/2 - 32/8: steel cabinet, lockable

For further information on the emergency power supply units please refer to the technical data on the following page or the mounting and operating instructions.

GEZE RWA opening and locking systems

The GEZE RWA opening and locking systems consist of the systems RWA 100 E, RWA 105 E and RWA 110 E.

General product features

- ▶ for aluminium, timber and plastic windows
- ▶ large opening width
- ▶ safe mechanical locking
(for very high and wide windows it is possible to install several locking devices)
- ▶ fitting closely to the profile – the motor is mounted directly on the casement and does not jut into the room
- ▶ low operating noise
- ▶ control via emergency power supply unit E 260 N
- ▶ **all systems are equipped with an electric spindle drive GEZE E 250 / 24 V DC-Vds**
(for technical data see page 20)

Main field of application

▶ GEZE RWA 100 E

bottom-hung, top-hung and side-hung inward-opening windows

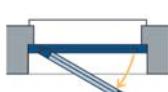

bottom-hung,
inward-opening

top-hung,
inward-opening

side-hung,
inward-opening

▶ GEZE RWA 105 E

post-rail structures and side-hung windows, inward-opening; even for applications with limited space

side-hung,
inward-opening

▶ GEZE RWA 110 E

bottom-hung, top-hung and side-hung outward-opening windows

bottom-hung,
outward-opening

top-hung,
outward-opening

side-hung,
outward-opening

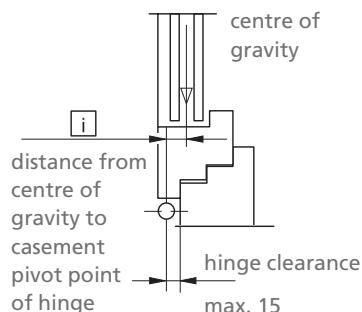

Information: For all opening systems please observe the guideline for power-operated windows, doors and gates BGR 232 (formerly ZH 1/494)!

GEZE RWA 100 E and 100 E Tandem

For bottom-hung, top-hung and side-hung, inward-opening windows

GEZE RWA 100 E / 24 V DC

- motor fitting closely to the profile, available with 4 different strokes

Range of application *)

- for inward-opening bottom-hung, top-hung and side-hung windows
- for aluminium, plastic and timber-framed windows
- width of casement: 360 – 1200 mm
(for plastic casements max. 800 mm)
- height of casement: 470 – 1700 mm

For extremely wide casements it is possible to use the drive in tandem configuration with 2 motors and special synchronised cut-off E 102.

Installation

- space requirement on the locking side = min. 32 mm
- space requirement on the motor side = min. 48 mm
- hinge clearance max. 70 mm
- hinge distance max. 15 mm
- from 1.2 m² window surface:
2 additional locking devices
- motor can be mounted on either left or right side

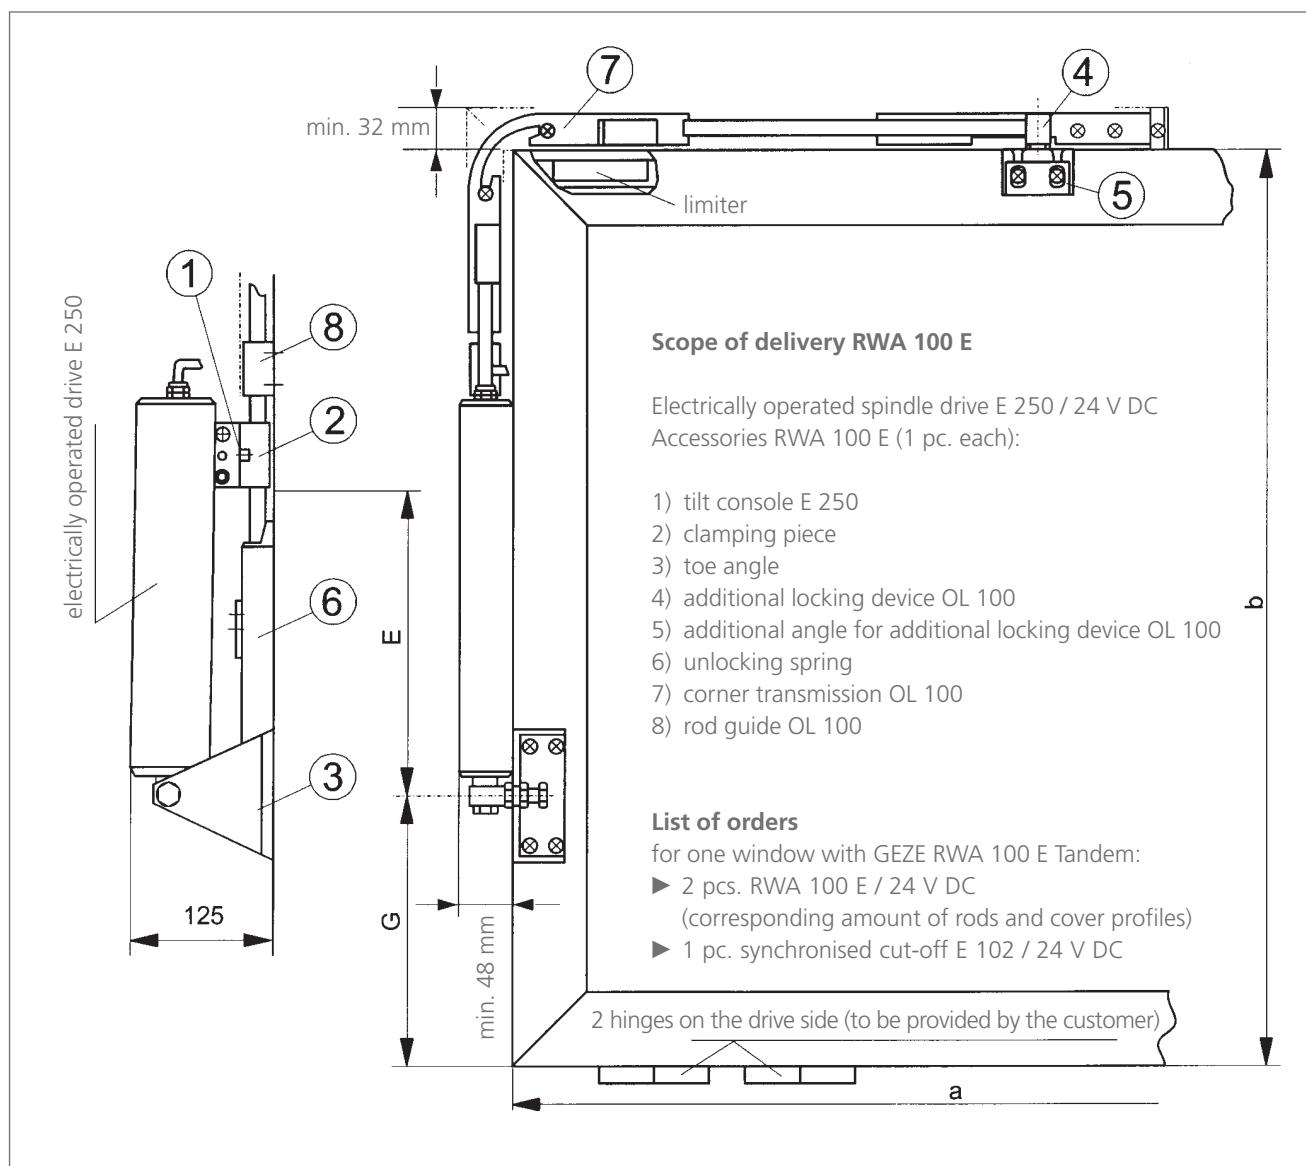

Installation drawing: 41521-9-0995-1

Range of application – determination of motor stroke

Synchronised cut-off E 102 / 24 V DC		101323

GEZE E 250 / 24 V DC

RWA drive for direct opening of side-hung, bottom-hung and top-hung inward and outward opening windows, skylights, light domes

If the drive is mounted to the wall frame it must be fixed with aluminium brackets that can be slided alongside. The control is made via emergency power supply units E 260 N in connection with RWA switches FT 4 and vent switches E 50.

In the case of very large and wide casements it is possible to mount 2 drives on either the left or the right side in tandem configuration.

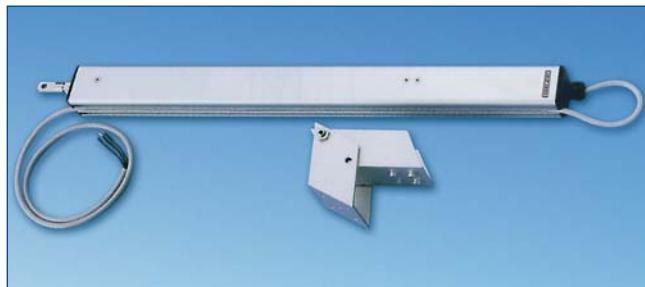

The connection is made via the synchronised cut-off E 102 / 24 V DC.

Product features

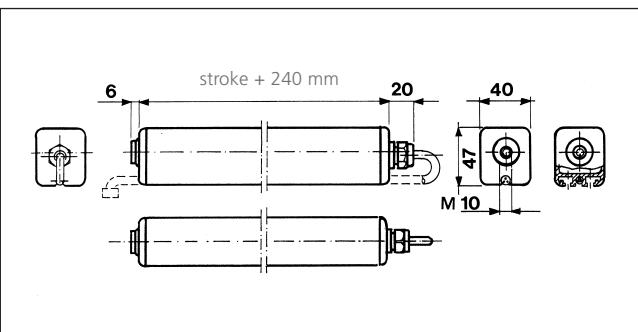

- electrically operated spindle drive in stylish housing
- small dimensions: 40 x 47 mm
- cables within the housing
- mechanical overload cut-out to protect the planet gear assembly and the spindle drive
- Low operating noise
- VdS certificate
- integrated in RWA opening and locking systems 100 E, 105 E and 110 E

optional:

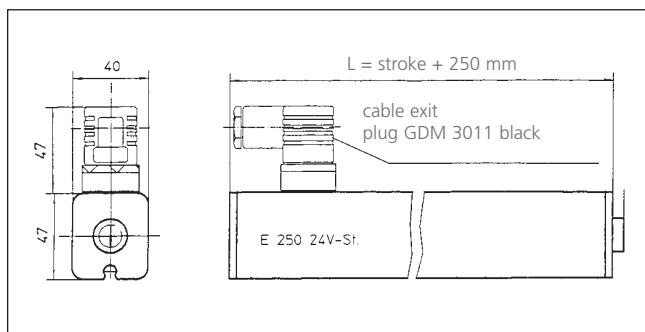

- stroke limitation possible
- remote position indication to control the end positions
- GEZE E 250 / 24 V DC in special design: special strokes, colours, cable length and plugs.

GEZE E 250 / 24 V DC

Electrically operated spindle drive GEZE E 250/24 V DC

special version with connecting plug

Technical data

Possible strokes	100, 150, 200, 300, 500, 700 und 750 mm Special strokes up to 1000 mm on request
Enclosure ratings	IP 65 (for dry rooms only)
Cable	3 x 0,75 mm ² , 2m
Operating voltage	24 V DC
Min. voltage for cut-out	20 V DC
Power consumption	0,9 A / 1,7 A (stroke length 500 mm - VdS)
Continuous duty	100 %
Temperature range	-5° bis +70° C
Lifting force at the spindle	for all strokes 750 N
Operating time (idle running / nominal load)	100 mm stroke length corresponds to 20 s.

Information:

- ▶ Secure the window against tilting and slamming during installation and disassembly of the drive!
- ▶ The local building regulations as well as the generally valid accident prevention regulations, DIN standards and VDE directive must be observed.
- ▶ In addition, the guidelines for power-operated windows, doors and gates BGR 232 (formerly ZH 1/494) issued by the German Federation of trade associations, the central agency for safety prevention and health at work will apply.

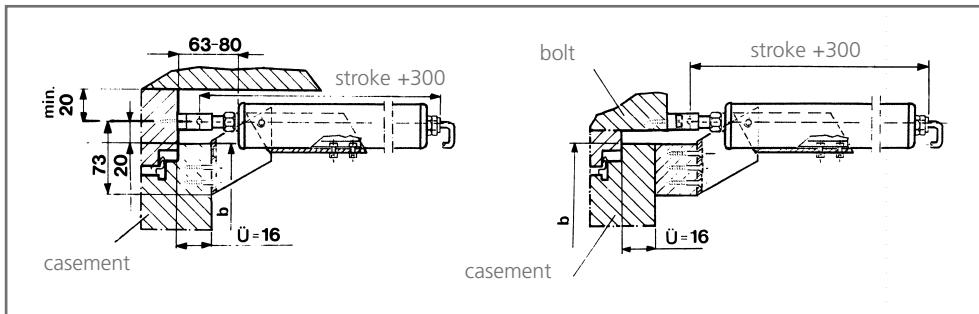

- ▶ All mounting and installation works must be carried out by a specialist.
Mounting (mech.): window manufacturer or metal worker
Installation (elect.): qualified electricians
- ▶ For further information on mounting, commissioning, maintenance etc. please refer to the installation drawings and the wiring diagrams.

Installation drawings:

GEZE E 250 AB / 24 V DC

Spindle drive with ventilation element

GEZE E 250 AB / 24 V DC

Common drives with enclosure ratings IP 65 are protected against splash-water. It can, however, not be excluded that humidity penetrates into the housing (air pump effect) which may lead to condensed water due to temperature differences which in turn may damage the drive.

Solutions by GEZE:

Electrically operated spindle drive E 250 AB / 24 V DC with ventilation element, for application in

- ▶ wet rooms
- ▶ areas with large variations in temperature
- ▶ protected exterior areas

Function

A component with breathable membrane integrated in the electrically operated spindle drive GEZE E 250 AB / 24 V DC effects that:

- ▶ the housing is depressurised and a pressure compensation is carried through, which prevents the penetration of dust and splash water.
- ▶ the formation of condensed water is minimised due to noticeable ventilation as well a low suction effect. The humidity is conducted outwards.

GEZE E 600 - E 680

Chain drives for RWA systems

Product features

The GEZE chain drives are slimline electrically operated drives for direct opening of bottom-hung, top-hung and side-hung and vertically pivoted windows. The drives are fitted parallel to the window and their corresponding colour matches the colour of the windows. All GEZE chain drives have a special chain, which transmits both tensile and tractive force. This chain precisely and safely operates the window casements. In closed position the chain is invisibly rolled up within the drive housing. In closed position the chain is invisibly rolled up inside the drive housing.

Scope of application

The GEZE chain drives are intended for vertically installed rectangular window in dry rooms. The drives GEZE E 640 and E 660 are also suited for angled windows (skylights) and light domes.

Tandem configuration

For extremely wide or heavy casements it is possible to use 2 drives in tandem configuration, with corresponding synchronised cut-off E 102.

Pivoting brackets

Owing to the pivoting brackets inward/outward the above-mentioned drive can be fitted to windows with small casement heights which considerably increases the scope of application.

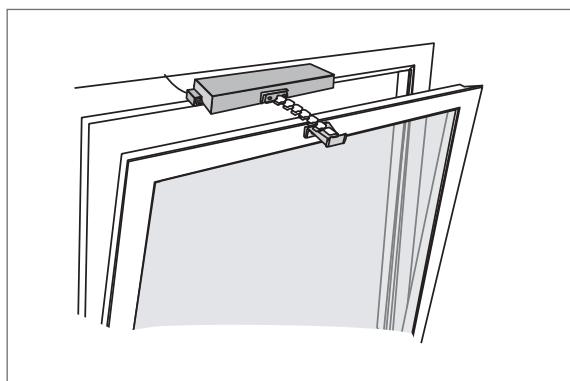

Depending on the casement overlap mounting plates are partly required.

GEZE E 680

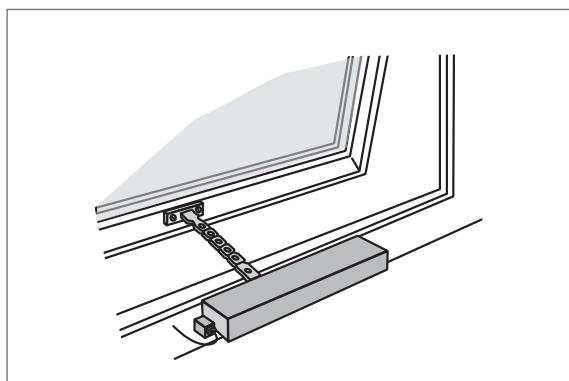

GEZE E 660

Example for application:

Bottom-hung inward opening window, electrically operated drive fitted onto the frame

Example for application:

Bottom-hung outward opening window, electrically operated drive fitted onto the frame

Mechanical locking bracket for GEZE chain drives

For windows with large casement areas it is often not sufficient to lock the casement via the drive only.

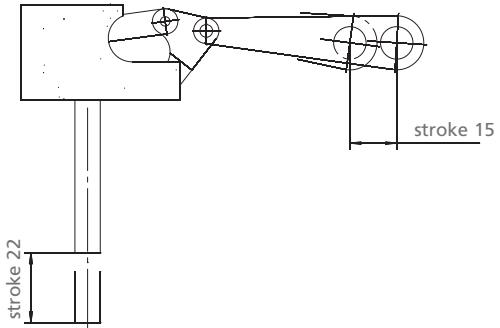

The solution: **Mechanical locking bracket**

- for all GEZE chain drives (E 600 - E 680)
- no additional follow-up control required
- no additional cables required
- for inward opening bottom-hung, top-hung and side-hung windows
- for all usual profile systems
- simple mounting using template
- increased tightness
- increased burglar resistance

Functions

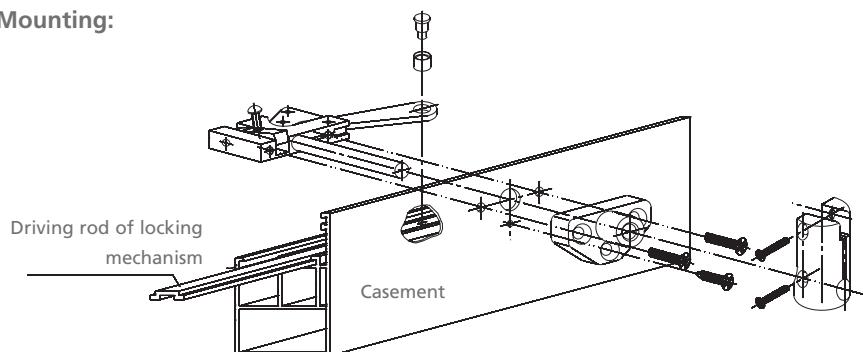

- When retracting or extending the chain drive the casement is electromechanically unlocked or locked – concealed via internal central locking device.
- The casement bracket of the concealed allround locking device takes effect on the driving rod which results in an arresting of the locking parts.

Mounting:

GEZE E 212 and E 205 / 24 V DC

Electric motors for the use in RWA systems in connection with slimline fanlight openers GEZE OL 100

Owing to this fanlight opening system several scissors can be actuated via one drive. The electrically operated drive GEZE E 212 distinguishes itself by an extremely narrow design. With a construction height of only 33 mm it can be used everywhere.

General product features

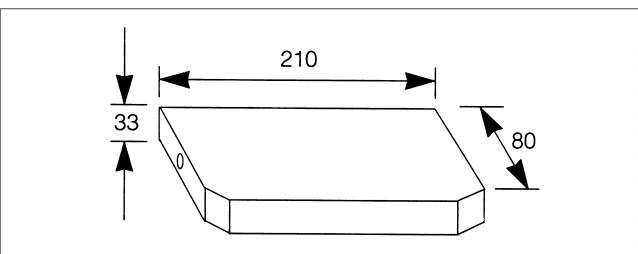

- ▶ suitable for mounting on left or right side, for vertical and horizontal mounting
- ▶ completely pre-fabricated modules, therefore less fittings
- ▶ simple mounting with exterior, coverable screw
- ▶ only one casement bracket for all overlap heights and materials, i.e. easy mounting
- ▶ small space required above and at the sides of the casements
- ▶ integrated, adjustable limit switches
- ▶ integrated motor protection (thermal latch integrated in winding)
- ▶ adjustable length of spindle stroke
- ▶ drives can also be used for louvre windows
- ▶ actuation via emergency power supply unit E 260 N

GEZE RWA Special versions

RWA-EL TÖ "OPEN" for doors

The system GEZE RWA-EL TÖ was designed for small rooms which only have small or no windows but a door, e.g. leading to a roof garden, a terrace or a balcony.

In this case the door can be used as smoke extraction opening in connection with the system GEZE RWA-EL TÖ "OPEN".

System configuration

The following components are required for this system:

For the lock:

- 1) electric door opener Fafix KL 24V AC,
Id.no. 005431
- 2) door lock and door handle
(the components are not part of the RWA system
and have to be provided by the door
manufacturer)

At the door lintel

- 3) 2. a door closer GEZE TS 4000,
Id.no. 102871 (silver) with guide rail and lever for
door leaf mounting on the hinge side and
transom mounting on the opposite hinge side

Alternatively: TS 4000 EFS or GEZE TS 5000 in
special mounting

In the area of the door or in a secondary room

- 4) one synchronising unit E10 / 24 V
Id.no. 006636
- 5) one emergency power supply unit
E 250 / 24 V DC, 1,2A
Id.no. 067445

In the staircase

- 6) 5. one pushbutton E 45 for alarm release
Id.no. 100898 (orange)
- 7) one or several smoke detectors (ceiling mounting)
and heat switches with plinth for automatic
alarm, Id.no. 091273

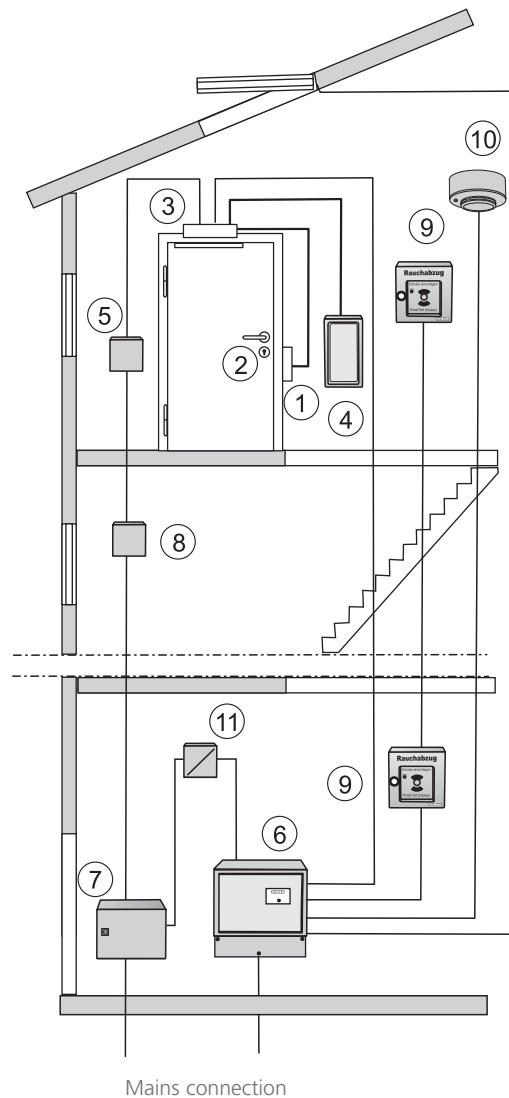

In special cases this system can even be used as fresh air opening.

GEZE RWA Special versions

RWA – with swing door drive GEZE TSA 160 Invers

The system is used for doors which are simultaneously used as fresh air or smoke vent openings in an emergency.

System configuration

The following system is an exemplary description. For further versions please refer to GEZE.

For the lock

- 1) escape door opener type 331
- 2) catch lock type 807-10

At the door lintel

- 3) swing door drive GEZE TSA 160 Invers;
the system can also be used for double-leaf doors

Next to the door:

- 4) switch pad to open the door in the standard mode;
other types of actuation e.g. radar are also possible
- 5) emergency-off switch (emergency door opens
without current)

In the area of the door or in a secondary room

- 6) emergency power supply unit E 260 N
- 7) emergency power supply unit USV 700 or 1000
(required if the door must not open in the case of
power failure)
- 8) main switch

In the staircase

- 9) RWA switch FT4
- 10) one or several smoke and/or heat detectors
(ceiling mounting) for automatic release
- 11) power pack

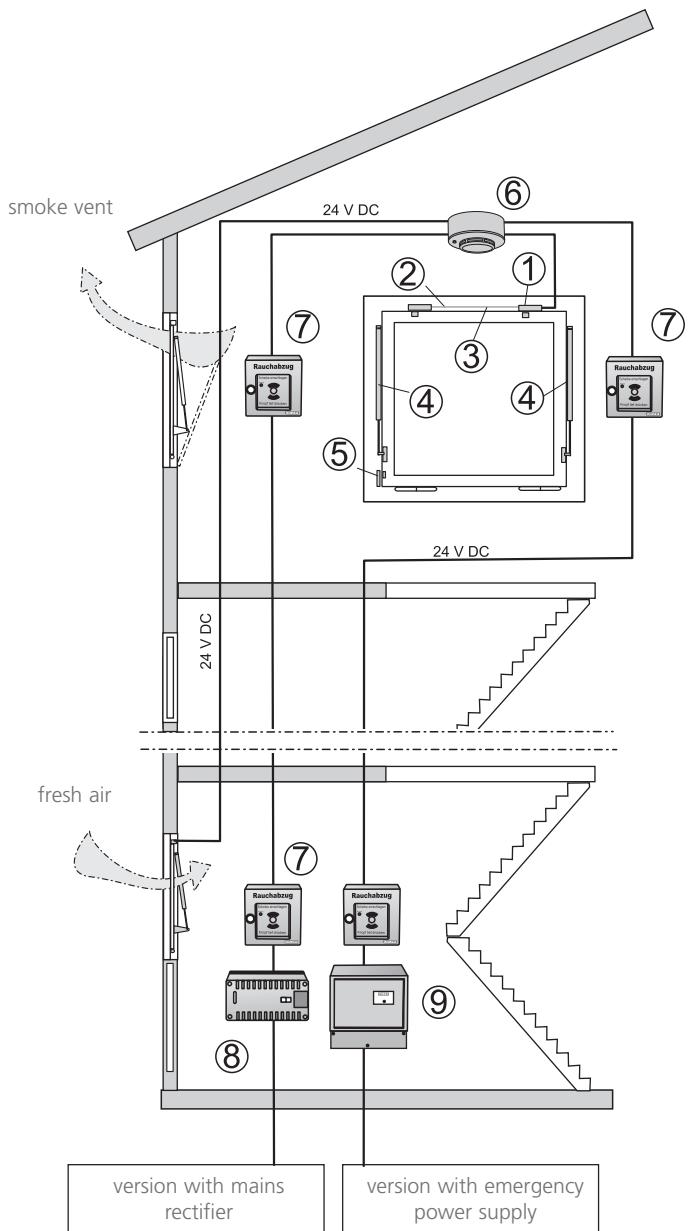

GEZE RWA Special versions

RWA-EM "OPEN" – electromagnetic

For vertically installed bottom-hung, top-hung, centre-hung and side-hung windows, inward opening.

With GEZE RWA-EM "OPEN" opening widths of up to 80° can be obtained.

- ▶ Casement width of 300 mm to 1000 mm (top-hung casement) or 1200 mm (bottom-hung casement) with magnetic primary lock
- ▶ Casement width up to 2000 mm (top-hung casement) or 2400 mm (bottom-hung casement) with magnetic primary lock, connecting rod and secondary lock

System configuration

- 1) Magnetic primary locking device E8/a for 24 V DC including casement bracket for overlapping and flush-faced windows
Id.no. 010834
- 2) Mechanical secondary locking device C8/b including casement bracket for overlapping and flush-faced windows, for casement widths of more than 1000 mm
Id.no. 028092
- 3) Connecting rod for mechanical connection of primary and secondary locking device
Id.no. 028125
- 4) Spring arm complete,
incl. frame and casement bracket with back check, spring pressure, spring stroke and elastic force are adapted to the window system
Id.no. 057277 (150 N, stroke 150 mm)
Id.no. 053049 (150 N, stroke 200 mm)
Id.no. 057278 (150 N, stroke 300 mm)
Id.no. 013436 (150 N, stroke 400 mm)
Id.no. 053050 (250 N, stroke 200 mm)
Id.no. 015934 (300 N, stroke 300 mm)
- 5) Contact switch (to be provided by the customer) for indication of "window open" if the window has opened unintentionally in the case of power failure
- 6) Smoke and heat switch (ceiling mounting) type 142 with plinth for automatic release
Id.no. 091273
- 7) Pushbutton E 45 "OPEN with light", including pane, lockable. To be installed on the first and upper floor, in addition at other places
Id.no. 100897 (orange)
in connection with rectifier
- 8) Mains rectifier E8g/24 V DC capacity in accordance with the number of magnetic locks and smoke switches
Id.no. 050767 (for 2 MV)
Id.no. 103403 (for 1-7 MV)
- 9) Emergency power supply unit E 250/24 V DC with integrated accumulator, to bridge short-term power failures
Id.no. 067445

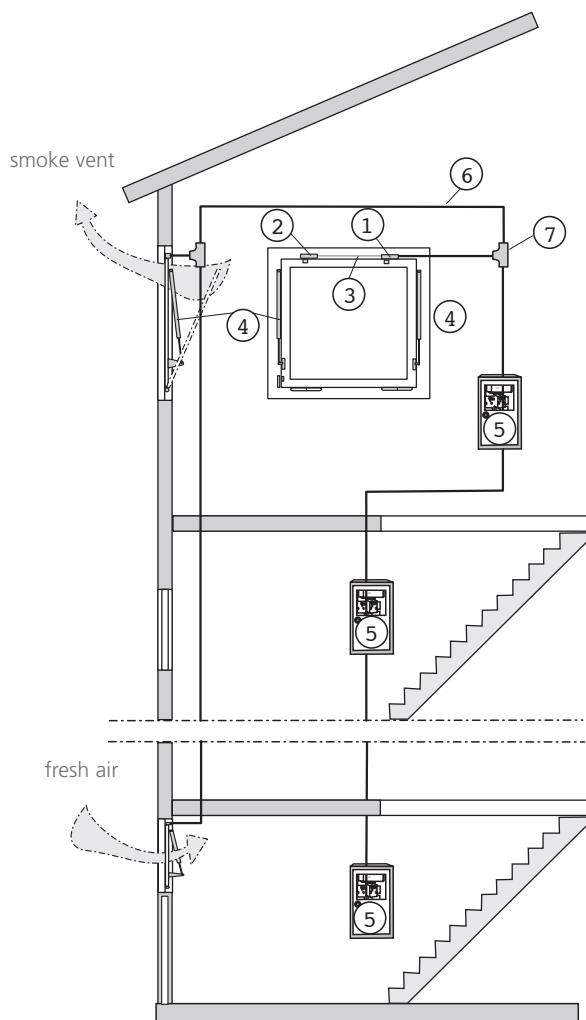

GEZE RWA Special versions

RWA-CO₂ "OPEN"

For vertically installed bottom-hung, top-hung, and centre-hung windows, inward opening.

- ▶ Casement widths up to 1000 mm (top-hung casement) or 1200 mm (bottom-hung casement) with CO₂ primary lock
- ▶ Casement widths up to 2000 mm mm (top-hung casement) or 2400 mm (bottom-hung casement) with CO₂ primary locking device, connecting rod and secondary locking device

System configuration CO₂ "OPEN"

System with manual release

- 1) CO₂ primary lock for pressure gas or pressure air, with two casement brackets for inward and outward opening casements
Id.no. 028035
- 2) Connecting rod for mechanical connection of primary and secondary locking device
Id.no. 028092
- 3) Link rod for mechanical linkage of primary and secondary locking
Id.no. 028125
- 4) Spring arm complete, incl. frame and casement bracket with back check, spring pressure, spring stroke and elastic force are adapted to the window system
Id.no. 057277 (150 N, stroke 150 mm)
Id.no. 053049 (150 N, stroke 200 mm)
Id.no. 057278 (150 N, stroke 300 mm)
Id.no. 013436 (150 N, stroke 400 mm)
Id.no. 053050 (250 N, stroke 200 mm)
Id.no. 015934 (300 N, stroke 300 mm)
- 5) Alarm box with integrated flap valve, for manual release
 - a) without inspection pane, Id.no. 053141
 - b) with inspection pane, Id.no. 053140
- 6) Copper tube 6 x 1 mm
Id.no. 105811
- 7) T-2. T-fitting for copper tube 6 x 1 mm
Id.no. 004269
