Dear Customer

I am delighted to present this, the first publication of the Franke South Africa Washroom Systems (WS) newsletter.

This is a wonderful platform from which to inform you on some of the more notable achievements of our Washroom Systems Division. These include:

1. Our investment in technology and sustainable growth;
2. Our interactive 3D rendering competition;
3. Our new training facility located at our factory in Durban;
4. Projects which we have been involved in;
5. Some new and innovative products and
6. Our new revamped product guides.

Franke South Africa showed good sales growth in 2012 in spite of a challenging market. I am happy to say that it appears that we will continue to build on this success in 2013. This achievement is the result of the loyalty of our customers, the dedication and energy of our people and the quality of the product sold under the Franke brand.

I thank everyone at Franke South Africa for their energy, teamwork and loyalty. I am conscious how important these are to the success of the Franke brand in Africa. I especially give thanks to my team leaders, Schalk de Beer (Commercial Manager FSA), Craig McIntyre (Operations Manager FSA) and Bill Harris (Technical Manager FSA). I also acknowledge the superb effort of the Washroom System Division's Sales Team.

A big thanks to you, our customer, for your loyalty and support over the years. Let's continue to grow our businesses together.

I invite you to visit our new Training Centre, Operations Plant and Sales Team in Mobeni, Durban.

Yours sincerely

Alan Palmer
Managing Director

STUDENT AND PROFESSIONAL ALIKE, AMAZE WITH THEIR BREATHTAKING DESIGNS

THE FRANKE WS DESIGN A BATHROOM COMPETITION WAS RUN BETWEEN 1ST MAY 2012 AND 30TH SEPTEMBER 2012. THESE ARE THE DETAILS AS WELL AS THE WINNING AND TOP 20 DESIGNS

FRANKE DESIGN A
BATHROOM COMP

Franke Washroom Systems is a world leading provider of intelligent washroom solutions to the public, semi-public and commercial sector. We are expert partners, dedicated to creating complete washroom systems that outshine the rest in functionality, design and durability.

Franke Washroom Systems recently ran a competition open to Professional Architects and Interior Designers as well as Student Architects and Interior Designers. The brief was to design a public ablution using Franke Washroom System products and submit 3D renders of their designs.

The purpose of the competition was to introduce the public to the hygiene of stainless steel bathroom products in the everyday bathroom environment, and step away from the idea that stainless steel is industrial, impersonal and cold.

Professional Category:

Philip Darby, Professional Interior Designer of PDI Design Consultants, really raised the bar with his winning design which portrayed a high-end bathroom design with 3D renders that left you wondering if they were in fact renders or photographs. This design awarded Philip with 1st prize, an all expense paid trip to the ISH Plumbing and Sanitaryware Fair in Germany in March 2013. He will be accompanied by Suria Ramnarain of our Gauteng Sales Department.

While the judging took place, it became very clear that it wasn't as clean cut as one winner, as the concept of the designs varied across the board, and not all of them could be rated on the same scale. It is for that reason that a best professional concept design was awarded to Stephen Parkes, of AdlerPrice Architects. While his design may not have portrayed the Franke products accurately or made much focus on them, the concept of the futuristic bathroom kept everyone thinking. Stephen was awarded a Zip MiniBoil Elite Tap for his design.

DESIGN A BATHROOM COMPETITION - PROFESSIONAL CATEGORY

FRANKE DESIGN A BATHROOM COMP

Student Category:

The student category really added value to the competition, as it allowed us to recognise the impact fresh ideas can have on design. Murray Farquharson, of BHC School of Design took first prize with the submission of a single 3D render. His clean cut image of a corporate bathroom left no doubt in the judges minds, Murray deserved the R5000 cash prize.

Andrew Mboyi, an architect student from Nelson Mandela Metropolitan University, submitted 3 designs in the student category. It was known immediately that, after Murray, he was a sure winner, the only debate was which design? After much deliberation, a decision was made and Andrew was awarded his cash prize of R2000.

Who doesn't dream of a beach retreat in Mauritius? An idea very well utilised by Simone Biggs. An interior design student at Cape Peninsula University of Technology, Simone's design created a longing to escape to the haven she had created. This alone made it very clear, that although she did not represent the Franke products very clearly, her design was worth of the Best Concept in the student category earning herself R1500.

We are proud to say that the competition was endorsed by the IID (South African Institute of Interior Design Professional). The IID is the only professional body representing the Interior Design industry in South Africa. The Institute is dedicated to establishing, promoting and

maintaining expertise, professionalism, sound business practice and high standards throughout the industry. After the preliminary round of checking each design against the basic entry requirements, Jocelyn Jones, CEO of Jossi Design, is the KZN Regional Head and the President Elect of The South African Institute for The Interior Design Professions (The IID). and Gareth Nezar, owner and architect of Arkus Architects were invited in as our external judges on the panel who selected the winners from a large selection of submissions received.

The WS Design a Bathroom Competition was included as part of Cape Peninsula University of Technology and University of Johannesburg Interior Design syllabus.

After seeing the success of this competition as well as seeing the quality of the designs that were submitted, Franke Washroom Systems is considering the Design a Bathroom Competition to be a Bi-Annual event.

All 5 winning designs, as well as the Top 20 Designs can be viewed at www.frankedesign.co.za.

Handing over the 1st Prize in the Professional Category to professional Interior Designer, Philip Darby of PDI Design Consultants

FRANKE ACADEMY - NEW INTERACTIVE TRAINING FACILITY

NEW INTERACTIVE
TRAINING FACILITY

FRANKE ACADEMY - NEW INTERACTIVE TRAINING FACILITY

Franke recognized the needs on training and as such invested R2 million in a new training facility at it's Durban factory.

The new facility is fully plumbed to enable architects, plumbers and end users to share their experience with us and by doing so continue to develop products to meet market demands .

Setting up of the new training facility proved to be a challenge as our products can be use in a wide range of applications but in the end we have now installed products in sections such as:

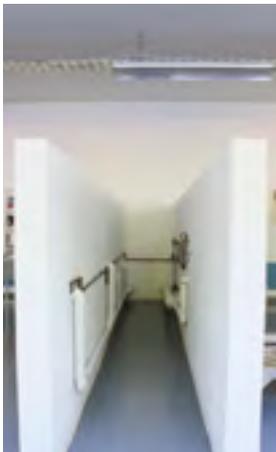

- Washroom Systems
- Sanitaryware and Laundry Products
- Security Products
- Hospital Products
- Mortuary Products
- Deko Disinfection Units
- Zip Instant boiling Water & Chillers

The training facility also includes a fully interactive white board to enable electronic filing and communication.

All training scripts have been completed and we look forward to visits from our clients in this regard, and continue to develop skills and products through interactive training and communication.

Should you require any assistance, please contact Vanessa Revie at 031 450 6300

K-RITH Research Institute for TB and HIV - Durban, Kwa Zulu-Natal

The Kwa Zulu Natal research institute for tuberculosis & HIV was established on 6th August 2009 to tackle one of humanity's major global health challenges, that of HIV & TB co-infection.

The new K-RITH building project is located on the campus of the University of Kwa Zulu Natal's Nelson Mandela School of Medicine in Durban & completion date is end of July 2012.

The new institute is housed in a state-of-the-art, 40,000 sq. ft. research building on the campus of the Nelson R. Mandela School of Medicine on the UKZN campus in Durban, South Africa. The building contains approximately 6,000 sq. ft. of bio safety level-3 laboratory space to enable the safe handling of HIV and the bacteria that cause TB, mycobacterium tuberculosis and drug-resistant m. tuberculosis.

This foundation is funded by Howard Hughes foundation in the USA

Hospital Projects

King George V Hospital - Durban, Kwa Zulu-Natal

In 1939, King George V Jubilee Hospital was officially opened with 139 beds for the treatment of Tuberculosis patients. The world war produced a wave of industrial development in the cities, and a lack of proper living conditions for labourers newly recruited from the districts. This caused a tremendous growth of T.B. in South Africa. By 1956 the Springfield Hospital had been taken over and both hospitals were combined with a total number of 1291 beds and became known officially as King George V Hospital.

Due to the vintage of the initial building and the hospital, all the facilities are in a bad state. The redevelopment plans are in full swing and the building activities are taking place parallel with the hospital services.

King George V hospital serves an entire population of ± 9 million, including part of the Eastern Cape.

Franke has been proud to be associated with the rebuilding

Paarl Hospital - Paarl, Western Cape

The overhaul of Paarl Hospital in the Western Cape was aimed towards facilitating the ability of the hospital to fulfil its role as a Level Two Hospital for the local population of the Cape Winelands. The construction of Phase Two began in April 2008, and all additional work was successfully completed during 2010.

Enhancements to the facility included: an upgraded administration block; psychiatric block; provision for a specialist out-patient department; training facilities; upgraded site security and access control; an on-site helipad for the emergency services; administrative offices; as well as renovated residential accommodation for medical and nursing staff. The final value of the project was in the region of R315 million.

Nedbank - Sandton, Gauteng

The prestigious Nedbank Head Office in Sandton is the first GBCSA Green Star certified building in South Africa, having achieved a 4-star Design rating in October 2009 and a 4-star As-Built rating in September 2010. Phase II completes the Nedbank Campus, located in the heart of the Sandton business district.

The main elements that contributed to the four-star rating include the full economy air conditioning system, the Dali lighting system and energy efficient light fittings, the implementation of an efficient waste recycling system, both during construction and when the building is in use, and the fact that the building would achieve a 30% energy saving when compared with a conventional building.

This includes the use of gas for cooking in the kitchens, Heat Pumps for showers, no hot water in the wash hand basins. It was this principle that opened the door to the use of the Zip HydroTap.

The Zip HydroTap eliminates boiling excessive amounts of water in a kettle and reboiling the same water once it cools, as the boiling water is dispensed in the required portion size at the touch of a finger.

Manenberg Human Settlement Contact Centre - Manenberg, Western Cape

A NEW Human Settlements Contact Centre has opened in Manenberg. The aim of the centre is to manage the City of Cape Town’s rental stock and dwellings purchased through the City, as well as provide administrative support to ratepayers.

The City of Cape Town’s new human settlements contact centre in Manenberg is the second municipal building in South Africa, and the first fully constructed building by the City to have received a 4-Star Green Star SA Office Design Rating v1 certification from the Green Building Council of South Africa showing that government has a green intent.

Materials used in construction were selected for their eco-friendly content and low-carbon footprint in manufacture and delivery. Forestry Stewardship Council certified timber was specified, and recycled plastic bottles were used as insulation material.

Another City building, the electricity services head office located in Bloemhof, also boasts a 4-Star Green Star rating since August last year.

Ntuzuma Magistrates Court - Ntuzuma, Kwa Zulu-Natal

Bridge City is a new town centre under construction 17 km from the Durban city centre, bridging the communities of Phoenix and Inanda, Ntuzuma and KwaMashu, also known as INK, and linking them to the urban system. The new town will serve as the social and commercial centre to a population of over 800 000 people, who at present have generally poor access to facilities and social services

The award winning architectural building comprises of a 3 storey building comprising of offices, suites, tea kitchens, public & staff ablutions, lower basement & holding cells.

It has been decided that this new court will service the excessive cases that will assist the surrounding areas like Verulam, Phoenix & Inanda.

Such a facility, with regional, district, family, criminal, civil and small claims courts, will alleviate the burden on the Verulam court.

The court is approximately 13136m².

Franke Estonia HD Soft-closing Toilet Seat with Security Fitting

To compliment the new range of WC Pans, Franke have launched the Estonia soft-closing toilet seat. The Franke Estonia Self-closing Toilet Seat is a heavy duty toilet seat with lid manufactured from heavy duty Duroplast material. The toilet seat is manufactured with burn resistance, scratch resistance, cleaning friendly and chemical resistance properties. The vandal resistant mounting hinge is fitted prior to the WC Pan being mounted to the wall, preventing any tampering or theft of the toilet seat.

The seat is available in black or white.

Vandal resistant mounting hinge. The vandal resistant mounting hinge can be fitted to newly manufactured WC Pans or it can be retrofitted to most WC Pans.

Newly manufactured WC Pans will be pre-drilled to position the vandal resistant mounting in the perfect position. The holes for the mounting hinge can also be drilled at a later stage however it is easier when predrilled.

The mounting hinge has to be mounted and secured onto the WC pan before the WC is mounted to the wall. The mounting hinges are manufactured in such a way that they have a 360 degree adjustment.

Use the toilet seat to position the hinges and lock them in place. Once the mounting hinges are secured place the chrome caps over the mounting hinges to cover the fitting.

When positioning the toilet seat make sure to check the labels indicating the left and right hand side of the toilet seat. The left hand side is on the left when standing in front of the WC Pan.

Position the toilet seat on the mounting hinges when the toilet seat is in the open position. Firmly press down on the hinges making sure they are in position. Close the toilet seat making sure not to lift the toilet seat out of position.

Lock the toilet seat onto the mounting hinges using the Alan Key supplied with the mounting hinges.

By simply lowering the Self-closing Toilet Seat slightly, the toilet seat will continue to close softly and slowly, unaided.

The same applies to the lid of the toilet seat.

The table is manufactured in grade 316 stainless steel with integrally constructed bowl and is supplied complete with all the plumbing fittings and is fitted with a 110mm waste outlet with a removable standing overflow.

Design Features:

Elevated View

NEW PRODUCTS

MORTUARY PRODUCTS

Body Racks

Standard and Obese Body Racks

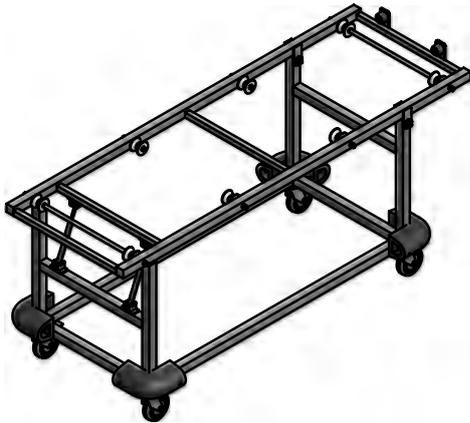

Body Racks are manufactured to comply with the standard mortuary design specification and dimensions, the struts and main bearers are fabricated from 40 x 40 x 1, 5 mm thick stainless steel square tubing and the stays and roller supports are 3 mm thick 304 stainless steel. The rollers are nylon and rollers shafts and rods are 16 mm diameter grade 304 stainless steel.

The racks are designed to add additional roller shafts assemblies and bearers to extend the racking to accommodate additional body trays (banks of 2, 3 etc.).

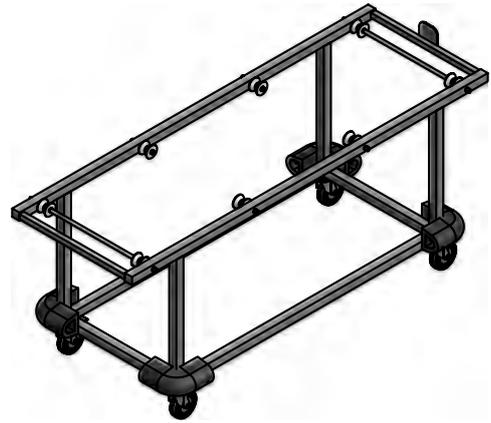

Transport Trolleys & Body Trays

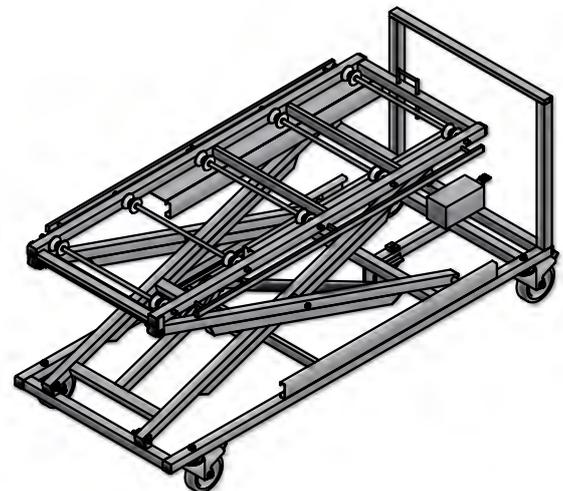

This is an essential part of the post-mortem laboratory and in the hospital the transport and hydraulic lifting trolleys are designed to transport the body from cold chamber racks to display trolley or autopsy table.

Franke Model TT Transport Trolley

Franke Model TLT Tilting Trolley

Franke Model ET Elevation Trolley

Able to raise up to ± 1.85 Meters High
