

ROBEX SPARTA-STAIN

Robex Spartacote's Sparta-Stain system incorporates high-quality Abstract Concrete Dyes and Robex Spartacote's Sparta-Flex clear sealers to create a variety of brilliant decorative concrete finishes. Abstract Concrete Dyes are formulated to penetrate adequately prepared concrete and create variegated effects similar to reactive stains. This system may be applied direct to concrete, stamped or stencilled concrete, and cementitious overlays. Sparta-Stain allows the installer to retain maximum flexibility during application, furthering the creative potential of any decorative concrete project.

ABSTRACT CONCRETE DYES ARE SPECIFICALLY DESIGNED TO BE COMPATIBLE WITH SPARTA-FLEX HIGH-GLOSS AND LOW-GLOSS SEALERS

An ideal topcoat for high traffic situations, Sparta-Flex clear sealers are designed to dramatically improve the appearance of underlying substrates while also providing outstanding chemical, abrasion and impact resistance. These products incorporate Robex Spartacote's DCC polyaspartic coating technology, allowing for greater durability and long-lasting performance. Sparta-Flex sealers allow for fast return to service with the capability for heavy foot traffic within a matter of hours, not days.

FEATURES AND BENEFITS

- One day installation and next day return to service
- Up to 3x more abrasion resistant than epoxy
- Low temperature application (down to -30°F)
- 100% UV clear with excellent gloss retention
- Walk on in as little as 1-2 hours
- Lays out flat with no roller marks or bubbles
- One to multiple coats
- Incorporates traction additive as necessary
